SAI KUMAR PADAKANTI

Senior RPA Developer / Automation Lead
Miami, FL |+1 (561) 334-9044 | padakanti7291@gmail.com
LinkedIn: https://www.linkedin.com/in/sai-kumar-robotic-process-automation/

PROFESSIONAL SUMMARY

- Senior RPA Developer and Automation Lead with 9 years of experience delivering enterprise UiPath automations across healthcare, telecom, finance and insurance. Proven track record designing scalable, reusable REFramework solutions that integrate multiple enterprise systems (SAP, Citrix, mainframe/legacy, SQL Server, Oracle) through REST APIs. Hands-on with UiPath Orchestrator, Document Understanding and AI-driven document extraction for claims processing, plus Azure and Power Platform integrations. Experienced in authoring PDD/SDDs, leading and mentoring development teams, and delivering through Agile/SDLC in regulated Medicaid/Medicare claims and eligibility environments. Certified UiPath Advanced Developer, working toward UiPath Solution Architect.
- Integrated UiPath and Power Automate solutions with Azure-hosted services, SharePoint, Teams, Dataverse and REST APIs across cloud (SaaS/PaaS) environments.
- Built AI-driven claims document extraction using UiPath Document Understanding, OCR and ML skills (AI Center), with validation and exception routing.
- Implemented CI/CD and source control with Git and Jenkins for automation deployments across UAT and production.
- Configured and governed multi-environment platforms (Orchestrator, Power Platform environments, Windows VMs), which maps to “application/system configuration.
- Called Azure OpenAI / Azure AI Foundry-deployed models from UiPath workflows via HTTP/REST to classify, summarize or extract data from claims correspondence.
- Cross-domain delivery across Healthcare (Medicaid/Medicare), Telecom, Finance, and Supply Chain — consistently delivering 50–60% cycle-time reductions and 98%+ accuracy improvements.
- Mentoring and governance: Led UiPath and Automation Anywhere teams, enforced coding standards, conducted PDD/SDD reviews, implemented design standards for scalability, and delivered automation best practices.
- Business process alignment: Collaborated with SMEs and stakeholders to analyze workflows, identify processes for automation, recommend UiPath and Automation Anywhere solutions, and deliver high-ROI automation initiatives.
- Integration and automation expertise: Automated SAP, Citrix, Excel, legacy applications, SQL Server, Oracle, REST APIs, Power Automate, Power Apps, SharePoint, and Azure cloud environments using UiPath and Automation Anywhere bots.
- Cognitive automation & AI-driven document processing: Leveraged UiPath Document Understanding, ABBYY, and Google OCR in UiPath and Automation Anywhere workflows for invoice processing, claims automation, and structured/unstructured data extraction.
- Process optimization and efficiency improvements using UiPath and Automation Anywhere: Selector tuning, retry logic, parallel execution, memory-efficient workflows, achieving up to 99% accuracy and 60% cycle-time reduction.
- Project infrastructure and bot management: Designed UiPath Orchestrator and Automation Anywhere Control Room environments, scheduled bots, deployed multi-bot workflows, and ensured audit/compliance logging.
- Versatile automation development: Built front-office and back-office bots in UiPath and Automation Anywhere, automated web and desktop apps, used PDF/Image/Text automation, mainframe integration, and ensured enterprise-grade security and monitoring.

TECHNICAL SKILLS

- RPA & Intelligent Automation: UiPath (Studio, REFramework, Orchestrator, Queues, Assets, Document Understanding, AI Center, ML Skills), Automation Anywhere A360, Blue Prism, Power Automate (Cloud Flows, Desktop)
- Azure & Cloud AI: Azure (SaaS/PaaS/IaaS integrations), Power Platform (Dataverse, Environments & Solutions), Azure AI Foundry, Azure OpenAI, Azure AI Document Intelligence, Azure Key Vault / Blob Storage / Functions / Logic Apps, Generative AI and Agentic Automation (UiPath agents, human-in-the-loop)
- Programming & Scripting: Python, VB.NET, SQL, PowerShell, C#, Java, object-oriented design principles
- Integration & Systems: REST APIs, SOAP, web services, SAP, Citrix, mainframe and legacy systems, Salesforce, SQL Server, Oracle, SharePoint, Teams, Excel, PDF/OCR (ABBYY, Google OCR)
- Design & Delivery: Solution Design Documents (SDD/PDD), modular and reusable component libraries, rapid prototyping, performance optimization, SDLC, Agile/Scrum, requirements gathering, stakeholder collaboration, team leadership and mentoring
- DevOps & Tools: Git/GitHub, CI/CD, Jenkins, JIRA, Confluence, ServiceNow (Incident, Problem, Change)
- Production Support & Governance: Root-cause analysis, exception and queue monitoring, bot performance tuning, SLA management, unattended bot setup on Windows VMs, audit/compliance logging
- Domains: Healthcare Insurance (Medicaid/Medicare claims and eligibility), Telecom, Finance, Insurance, Supply Chain

CERTIFICATIONS

- UiPath Advanced RPA Developer (AAP)
- UiPath Solution Architect, in progress
- Automation Anywhere Certified (A360)
- Azure AI-103 or AI-901, in progress.
- PL-500 (Power Automate RPA Developer Associate)

PROFESSIONAL EXPERIENCE

Client: North Carolina DHHS **MAR 2025 – Present**
Location: **Durham, NC**
Role: Senior RPA Developer / Automation Lead

Proof of work:

- Led end-to-end delivery of UiPath automations for Medicaid/Medicare eligibility verification, claims routing, and authorization validation, integrating SAP, web portals, Excel, and legacy systems into modular, queue-based REFramework solutions.
- Translated business and architectural requirements into Solution Design Documents (SDDs) through SME interviews and process mapping, applying modularity, reusability, and maintainability standards across 15+ production processes.
- Built reusable UiPath component libraries and coding standards adopted by the team, reducing development effort on new automations by [60%].
- Delivered a 45%+ reduction in manual workload and a 60% improvement in turnaround time across statewide healthcare operations.
- Integrated OCR and AI-based document extraction (UiPath Document Understanding) with email monitoring and rule-based Excel processing to automate high-volume healthcare document handling.
- Optimized performance with parallel queue consumption, retry logic, selector tuning, and exception routing, improving reliability and throughput of unattended bots on Windows VMs.
- Led and mentored developers through code reviews, design guidance, and sprint delivery while managing multiple concurrent automation efforts to meet delivery timelines.
- Integrated UiPath workflows with Azure services and REST/SOAP APIs to connect claims, eligibility, and member data sources across cloud and on-prem systems.

- Prototyped or deployed generative AI solutions using Azure OpenAI / Azure AI Foundry to classify or summarize claims correspondence, with human-in-the-loop validation in UiPath.
- Managed code in GitHub with branching and peer review, and deployed through CI/CD pipelines across dev, UAT, and production.
  Worked in Agile/Scrum with business analysts, process owners, and infrastructure teams, taking requirements from backlog to production release.
- Called Azure OpenAI / Azure AI Foundry-deployed models from UiPath workflows via HTTP/REST to classify, summarize or extract data from claims correspondence.
- Used Azure AI Document Intelligence alongside or in place of UiPath Document Understanding.
- Stored secrets and credentials in Azure Key Vault, or used Azure Blob Storage, Functions or Logic Apps as part of automation pipelines.
- Monitored automation health with Azure Monitor / Application Insights.
- Built or invoked UiPath agentic automations (agents embedded in workflows with human-in-the-loop review)
- Designed and deployed automated cloud workflows using Power Automate for healthcare document routing, approval chains, and SharePoint-driven notifications — leveraging connectors, triggers, conditional branching, and structured error handling.
- Built and maintained unattended PAD flows on Windows VMs for Medicaid/Medicare eligibility verification and SAP screen automation, integrated with cloud flows for end-to-end orchestration.

Client: Verizon Data Services **Jul 2018 – Dec 2022**
Location: Hyderabad, India
Role: RPA Developer / Automation Lead

Proof of work:

- Designed queue-based UiPath architecture for high-volume billing and provisioning workflows, using parallel execution, retry logic, and exception handling for scalable, resilient deployments.
- Automated complex multi-system transactions across SAP, Excel, legacy applications, and backend systems using REST APIs for end-to-end processing.
- Integrated UiPath Document Understanding and ABBYY for invoice processing and claims validation, achieving 98%+ accuracy in key billing and reconciliation workflows.
- Led the bot lifecycle from PDD/SDD through deployment, enforcing coding standards, running peer reviews, and maintaining reusable libraries for scale.
- Mentored junior RPA developers and delivered 50%+ reduction in manual processing time.
- Connected Verizon Business Central, SharePoint, and backend APIs through HTTP connectors and error-handling scopes for cross-system data synchronization.
- Add if true:
- Wrote Python or VB.NET scripts and SQL queries to support data validation and integration within automation workflows.
- Developed custom .NET/C# activities or libraries to extend UiPath for reusable use across projects.
- Automated Citrix-based applications using image/OCR-based techniques.
- Designed and deployed A360 TaskBots and MetaBots for customer ticketing, billing reconciliation, and service provisioning; configured Control Room for multi-bot orchestration, credential vault management, and bot load balancing.
- Implemented Power Automate Cloud Flows for cross-system data synchronization between Verizon Business Central, SharePoint, and backend APIs — using HTTP connectors, approval triggers, and error-handling scopes.
- Set up and maintained unattended bot environments on Windows VMs, managing session isolation, license allocation, and runtime scheduling for 24/7 production automation.

- Acted as primary support contact for production bot failures — performed log analysis, exception queue triage, dependency resolution, and hotfixes; consistently met SLA targets for P1/P2 incidents.
- Followed Incident, Problem, and Change Management procedures for all RPA deployments and support activities; contributed to post-incident reviews and continuous improvement cycles.
- Led end-to-end bot lifecycle from PDD/SDD through deployment — enforced coding standards, conducted peer reviews, and maintained reusable component libraries for scale.
- Achieved 50%+ reduction in manual processing time and 98%+ accuracy in key billing and reconciliation workflows.
- Designed queue-based UiPath architecture for high-volume processing, implementing parallel execution, retry logic, and exception handling to ensure scalable and resilient deployments.
- Integrated OCR and AI-based data extraction using UiPath Document Understanding and ABBYY for invoice processing and claims validation.
- Configured UiPath Orchestrator assets, queues, schedules, and user roles; monitored bot execution and optimized runtime performance.
- Implemented multi-bot orchestration with Automation Anywhere Control Room, including credential vault management and secure bot deployment.
- Mentored junior RPA developers, conducted PDD/SDD reviews, enforced coding standards, and promoted reusable component libraries.
- Automated SAP, Excel, and legacy systems workflows, integrating REST APIs and other backend systems for end-to-end process automation.
- Provided go-live support, hyper-care, root-cause analysis, and operational training for business and IT teams.
- Delivered automations achieving over 50% reduction in manual processing time and improving accuracy to 98%+ in key operations.

Client: Genpact **Jun 2016 – Jun 2018**
Location: Hyderabad, India
Role: Robotic Process Automation Developer

Proof of work:

- Built UiPath and Automation Anywhere solutions for insurance claim verification and invoice processing, applying REFramework and exception handling.
- Used UiPath Document Understanding, ABBYY, and Google OCR to extract data from claims documents, enabling straight-through processing and up to 60% cycle-time reduction.
- Created reusable component libraries and RPA design standards, improving scalability and maintainability across processes.
- Merge the five or six Power Automate, A360, Windows VM, and ITSM bullets in each role down to one or two. They crowd out UiPath and the AI/integration work this role wants.
- Partnered with IT, security, and compliance teams to ensure secure, audit-ready automation.
- Provided hyper-care and ongoing production support — root-cause analysis, bot recovery, queue monitoring, and SLA-compliant incident resolution for 10+ automation processes.
- Participated in change advisory processes for all production bot deployments; maintained documentation, run books, and incident logs in alignment with ITSM standards.
- Leveraged UiPath Document Understanding, ABBYY, and Google OCR for invoice and claims document extraction, integrated with bot workflows for end-to-end straight-through processing.
- Delivered up to 60% cycle-time reduction and measurable accuracy improvements across Finance and Insurance domain processes.
- Managed multi-bot deployments in Automation Anywhere Control Room, including credential vault administration and load-balancing of bot runners.
- Provided hyper-care support, root-cause analysis, and bot recovery strategies for production incidents, ensuring SLA compliance.

- Mentored junior developers, enforced RPA design standards, and created reusable component libraries to enhance scalability and maintainability.
- Collaborated with IT, security, and compliance teams to ensure secure automation practices and audit readiness.
- Continuously refined bot workflows, selectors, exception handling, and process logic to enhance efficiency, reliability, and scalability.

EDUCATION DETAILS:

M.S. in Computer Science - Florida Atlantic University , Boca Raton, FL **Dec 2024**

B.Tech in Computer Science Engineering - JNTU-Hyderabad **May 2015**
